About CAE Event:

As part of the CAE event, teams must submit a detailed report of various analysis done for the components/sub-system. Based on the report evaluation, the top 15 teams from each category will get a prior communication from BAJA SAEINDIA before physical round for the Weight Check. However, only selected top teams from each category will be shortlisted for the CAE Finals presentation based on both Report Evaluation and Weight Check.

Objective:

The aim of this event is to evaluate the team's depth of knowledge in CAE Analysis, optimization study, and its application to build a light and durable vehicle. The CAE report should contain details of each analysis such as the objective, methodology used, modelling, pre-processing parameters, constraint, boundary conditions, solver setting, and result outcome with contours, diagrams, plots, graphs, etc.

Rules:

- Teams have to submit a CAE report having a maximum of 10 pages for mBAJA category, whereas 12 pages for eBAJA category. Teams have flexibility regarding the format of the report.
- CAE Report should be submitted in PDF format with the file name in the below format: **TeamID_Team Name_CAE Evaluation Report.pdf**
- The deadline for submission of the CAE Evaluation Report is **1st December 2025.**
- Submission of the CAE Evaluation report should be done on the **BAJA SAEINDIA website** under the submission section of the team profile.
- Teams ranking in the **top 15 (based on Report Evaluation score)** must conduct weight checks on the first day of the Physical Event. Failure to do so will result in disqualification from the CAE Finals Event.
- **Selected top teams** from each category will be shortlisted during the Physical Event, based on the report evaluation score and physical vehicle weight, qualifying them for the CAE Finals Presentation Round.
- The list of shortlisted teams selected for CAE Finals will be released separately on the **BAJA SAEINDIA forum** by the end of Day 1 of the Physical Event.
- Teams are required, but not limited, to cover the following areas in their CAE report:
    - CAE analysis objective and target – FOS, Deformation, Max Stress, Frequency, or Life, as applicable.
    - Material properties
    - Mechanical – Ultimate and Yield strength, Poisson's ratio, Thermal Properties, etc.
    - Material Model – Linear/Non-linear
    - CAE Process – Element type and size, order, Bolted and weld connection element type, etc.
    - Elements quality and how they affect the results.
    - Load Cases and boundary conditions – calculation method and point of load application.
    - Images with points of max displacement and max stress highlighted.

- The Winners of the CAE Event will be determined from the following criteria:

Sr. No.	Description	Points
1	Report Evaluation	10
2	Finals Presentation	40
Total		50

Evaluation Criteria:

The evaluation will be based on the following criteria:

1	Roll cage Analysis	6	Multibody Dynamic Analysis
2	Static Analysis	7	Thermal Analysis
3	Dynamic Analysis	8	Fatigue Analysis
4	Torsional & Bending Analysis	9	Powertrain Simulation & Analysis
5	CFD Analysis	10	Overall CAE Fundamentals and Knowledge

Finals Presentation:

Shortlisted Top teams from each category for CAE finals will be evaluated as per the format below, while the evaluation criteria remain the same.
The presentation should cover the overview of all the criteria mentioned above and need to be presentedin front of panel judges. The schedule for the presentation slotting will be released separately at the **BAJA SAEINDIA forum**.

Presentation Format:

- Teams have the flexibility regarding the format of the presentation, but teams should ensure that the presentation should be explained within 15 Minutes.
- **Each team will be evaluated over a 30-minute** time which includes the setup of the Presentation, Introduction, Presentation, Q&A, and feedback by the judges.
- **A maximum of 5 team members** is allowed for the presentation.
